

failover - system redundancy
addl device is config to function
when primary fails

Cold site
acquire equip at time of incident

MD5 = 32 char

Sha256 = 64 char

Warm site = 24-48 hours

Mirrored site - data sync between
Sites

Using naming conventions

Using naming conventions

- nicknames/dict words
anon users; not good
don't properly id users
- naming conventions can/cannot
be enforced by policy
- naming conventions do not
require combo of words/#
