Practice test 12

Sunday, October 22, 2023   2:42 PM

Business continuity = processing redundancy supporting the workflow through failover
COOP = gov facilities; backup methods of performing mission functions without IT support
DRP = recovery of primary business functions when disrupted
Retention policy = retention of data

CI = checkout and test
Delivery = just testing

SaaS who is responsible for the security and patching of the app and its components - CSP
    Not CASB; CASB is a tool not an entity

SAN = block-level data to be accessed by multiple users
NAS = file-level data for common group of clients

Opal compliant = disk encryption
    Specs that define a management interface for a host app to activate, provision, and manage
    encryption of data on SED

Data steward
    Labeled
    Collected and stored in compliance

Deployed similar to card skimmer = malicious usb plug
    Placed over port
    Card cloners are used with specialized card reader or with RFID scanner

Memdump = Linux not windows

Vulnerabilities related to DLL injections
    Use malware with admin privileges
    Evade detection through refactoring

    Shimming = enable legacy mode to exploit OLD apps, not modern
