Practice test 11

Auth apps
- Static codes
- token keys
- PKI

PDS = wire fire optic; no downgrade

==fire triangle==

heat

ox /\ fuel

CSRF = exploit apps that use cookies
to auth users

CN = pc or machine by name

FQDN

SAN = replacement of CN

name of company as <u>CN</u> when creating
Code signing certs

CA as CN when making root cert

TACACS+ vs RADIUS

- TCP for reliable connection delivery
    easier to see when server
        down
- better flex and reliable

All data in TACACS+ is encrypted
TACACS+ more for device management
than for auth end devices
central control of accounts for manage
    routers, switch, firewall
privileges of ↗ these accounts
