Practice test 15

Monday, October 23, 2023   8:34 PM

Best encryption for IoT devices = lightweight
     Even though ECC is an option

Data masking = coding
Tokenization = DB

Diff, incremental, and full copy backups will not collect open files
     Copy-based backup is a replica of IT system

Snapshot = point in time copy of data in a system
     No open files

Image = duplication of an OS installation
     Does not contain user files

Cross site request forgery = forces an end user to execute unwanted actions on a web app they're currently auth to
     Server requests

Client side request forgery = tricking user into making unintended internal requests

AP isolate prevents connected clients from communicating with each other, even on same subnet
